ivan_kostaschuk@ukr.net

Abstract: The paper presents the review of previously made schemes of sacral (religious, confessional) regionalization of the territory of Ukraine, presented in the works of human geographers. Taking into account these elaborations, their advantages and deficiencies, the author proposes own methodology of confessional regionalization, including its basic principles and criteria. Confessional regions, sub-regions, areas and localities are proposed to be the units of confessional regionalization of the territory of Ukraine. The developed methodology allowed identifying 6 confessional regions in Ukraine, with 2 of them further divided into sub-regions. This approach to regionalization allowed better trace regional patterns of confessional structure, including dominant confessions and their relationships. The necessity of this study is dictated by the need to develop a state strategy for the development of inter-confessional and state relationships, as well as the implementation of the state regional policy in the field of religion in certain regions of Ukraine. The proposed methodology of confessional regionalization can be adopted for other countries or their parts.

Key words: religious regionalization, confessional regionalization, confession, regionalization, principles and criteria of regionalization, religious activity.

Introduction

Modern society, being at the informational stage of development, has faced many inter-ethnic and inter-confessional conflicts that have exacerbated the problem of confessional peace, both in the world as a whole and in Ukraine in particular. Scientific research of religious and, eminently, confessional space today is inevitable and much in demand by the society. Geographical researches, studying the confessional space and its regionalization, are of particular relevance, as only they allow clear identification and tracing the spatial divisions in the confessional space, understanding the causes of the origin of religious conflicts and making appropriate forecasts, as well as developing ways of their alleviation.

Such studies are especially important for modern Ukraine, where the relationships between two Orthodox confessions, namely the Ukrainian Orthodox Church and the Ukrainian Orthodox Church of the Kyiv Patriarchate, as well as between the Ukrainian Orthodox Church and the Ukrainian Greek Catholic Church, have worsened. In our opinion, confessional regionalization should be carried out in compliance with numerous principles and criteria meeting the methodological requirements of human geography.

Therefore, the research represented in this paper seems to be relevant and promising, as it contributes to the development of the theoretical and methodological base of human geography in general and the geography of religion in particular, which in turn provides a better understanding and generates new approaches to geographical research of confessional and religious spaces.

Theoretical and methodological background

The following scholars have focused on confessional space and spatial patterns of the religious sphere in Ukraine and its separate oblasts: F. Zastavnyi, O. Liubitsyeva, K. Mezentsev, I. Rovenchak, M. Dnistryansky, S. Pavlov, L. Shevchuk, A. Kovalchuk (the whole territory of Ukraine), L. Nemets, K. Nemets, L. Kluchko (Kharkiv oblast), O. Kuchabsky (Lviv oblast), V. Patyuchchuk (Volhyn oblast), Yu. Kogatko (Chernihiv oblast), I. Kostaschuk (Chernivtsi oblast), L. Ataman (Podolian region, including Vinnytsia, Khmelnytsky and Ternopil oblasts), and others. Such scholars as O. Topchiev, O. Shabliy, A. Golikov, Ya. Oliynyk, M. Pistun and others (Ukraine), H. Park, L. Kong and others (Great Britain), P. Zukerman, V. Lowell, R. Horace, J. Esposito, S. Hitchcock and many others (USA), K. Matsui (Japan), S. Gorokhov, T. Khristov and others (Russia) and many other scholars from around the world devoted their scientific works to the theoretical and methodological substantiation of the geography of religion as an important human geography branch.

Almost every of these scholars studied the issue of religious-geographical regionalization from the standpoint of human geography. Their works substantiate the criteria, principles and grounds of making regionalization based on religion patterns. However, the existing methods of religious confessional regionalization practically do not take into account the religious activity of the population as a factor in the development and formation of the confessional space, being an integral part of the religious and sacred spaces.

Study goals and objectives

The purpose of this paper is to analyze and generalize the existing criteria, principles, approaches and methods of confessional regionalization with the subsequent elaboration of the own regionalization methodology and its approbation carrying out the confessional regionalization of Ukraine. In accordance with the goal we set the following tasks: to analyze the previous methods and schemes of religious regionalization of Ukraine; to offer one’s own methodology of confessional regionalization generalizing the previous experience, including various criteria, principles, approaches and methods; to perform confessional regionalization of Ukraine; to determine the further significance and prospects of geographical research of religious and confessional spaces.

Review of existing schemes of religious regionalization of Ukraine

It should be noted that all existing schemes of religious regionalization were developed by the authors using various approaches and methods, as well as using different criteria for the identification of religious or confessional regions. Therefore, to improve the methodology of confessional regionalization, we have analyzed already existing schemes.

The first religious regionalization of the territory of Ukraine was conducted in 1994 by O. Shabliy, who distinguished 4 religious regions: Western (Volhyn, Zhytomyr, Rivne, Vinnytsia, Khmelnytsky, Ternopil, Ivano-Frankivsk, Lviv, Chernivtsi and Transcarpathian oblasts); Central (Kyiv, Chernihiv, Sumy, Cherkasy, Kirovohrad and Poltava oblasts); Eastern (Donetsk, Luhansk, Kharkiv and Dnipropetrovsk oblasts); Southern (Crimea, Odessa, Zaporizhia, Mykolaul and Kherson oblasts) [18]. It is worth noting that due to the confessional heterogeneity, the Western region was further divided into several more zones, namely: Transcarpathian, Western Volhynian, Bukovinian, Galician and Podolian-Volhynian [18]. L. Shevchuk follows this scheme of regionalization in his scientific works [19]. The main criterion that underlies such regionalization is the religious activity of the population, which is characterized by the number of existing religious communities, as well as their religious affiliation.

In the scientific work “Geography of religions: the main tasks and prospects of development” [13], V. Patyuchchuk presented a scheme of religious regionalization with five religious regions: Western (Chernivtsi, Volhyn, Transcarpathian, Ivano-Frankivsk, Khmelnytsky, Ternopil, Rivne and Lviv oblasts); Northern (Chernihiv, Kyiv, Zhytomyr, Cherkasy, Poltava, Sumy, Kharkiv and Vinnytsia oblasts); Eastern (Kirovohrad, Dnipropetrovsk, Zaporizhia, Donetsk and Luhansk oblasts); Southern (Odessa, Kherson and Mykolaiv oblasts); Crimean (Autonomous Republic of Crimea). The basis of such regionalization was the number of denominations and their relative weight in the religious sphere, as well as factors influencing the process of the religious space formation and their manifestation.
Religious regionalization, proposed by S. Pavlov, K. Mezentsev and O. Lyubitseva [12], reflects primarily the confessional structure of the population, the number of religious communities of different denominations, and existing trends. This scheme provided for seven religious regions: Volhynian (Rivne, north of Ternopil and Volhyn oblasts); Halychyna (Ivano-Frankivsk, Lviv, and the southern part of the Ternopil oblast); Transcarpathian (Transcarpathian oblast); Central (Kyiv, Poltava, Chernihiv, Zhytomyr, Sumy, Kirovohrad and Chernovtsy oblasts); Podolian-Bukovynian (Chernivtsi, Khmelnytsky and Vinnytsia oblasts); Southeastern (Donetsk, Luhansk, Zaporizhia, Kharkiv and Dnipropetrovsk oblasts) and Southern (Kherson, Odessa, Mykolaiv oblasts and the Autonomous Republic of Crimea). It should be noted that this scheme took into account not only the boundaries of administrative oblasts, but also historical regions, which we consider to be certainly a correct and scientifically grounded approach.

The religious regionalization of Ukraine, done by A. Kovalchuk [5], deserves a special attention. The main criteria that underlie this regionalization scheme are confessional structure, ethno-cultural aspects, as well as historical peculiarities of the formation of the territory of each administrative oblast. With this approach, the author identified 9 religious regions: Galician (Lviv, Ivano-Frankivsk and almost all Ternopil oblast, except for the northern part); West Volhynian (Volyn, Rivne and north of the Ternopil oblast); Transcarpathian (Transcarpathian oblast); Bukovynian (Chernivtsi oblast); Volhynian-Podolian (Vinnytsia, Zhytomyr and Khmelnytsky oblasts); Central-North (Sumy, Chernihiv, Kyiv, Poltava and Chernovtsy oblasts); Central-Southern (Odessa, Kirovohrad, Mykolaiv and Kherson oblasts); Crimean (Crimea) and Eastern (Dnipropetrovsk, Zaporizhia, Donetsk, Luhansk and Kharkiv oblasts) [5].

In addition to the schemes of religious regionalization of Ukraine, we analyzed also the relevant schemes at the regional level, identifying main approaches and principles used. Particular attention deserves the religious regionalization of Kharkiv (L. Kliuchko), Chernihiv (Yu. Kogatko) oblasts and Podolia (L. Ataman).

Proposed methodology for confessional regionalization

The confessional regionalization we understand as a scientifically substantiated division of a certain territory into separate parts (regions, sub-regions, areas, etc.), which are distinguished by the peculiarities of the confessional structure formed under the influence of various factors, primarily the historical and geographical features, as well as religious activity of the population.

It should be noted that in our study we differentiate between the religious (sacral) and confessional regionalization that arise from the human-geographical essence of the religious space and its proposed structure. Religious space we consider as a part of the sacred space, which in turn we divide into confessional space, atheists, agnostics and akirchs. The confessional space reflects the distribution of individual denominations and is divided into subspaces (Orthodox, Catholic, Protestant, Jewish, Muslim, pagan, etc.). Atheists are people who believe that God, like any other kind of high powers, do not exist. Agnostics are people who do not recognize the existence of God and other high powers, and argue that religion is created only to form moral and ethical norms in society. Akirchs are people who believe in God, but do not attribute themselves to any denomination, direction or course, believing that they are not needed by society.

Doing the confessional regionalization, which covers only the confessional figures and does not take into account the number of atheists, agnostics and akirchs, we propose to determine the rating place of a certain territory among others using the following indicators: the index of religious mosaics, the number of religious communities per population for each denomination separately; the number of clerics, presbyters and missionaries per population for each denomination separately; the number of clerics, presbyters and missionaries for separate settlements that is also calculated for each denomination separately.

To study the religious mosaic, we have interpreted the Ekkel’s index of ethnic mosaic and got the following mathematical model:

$$R_j = 1 - \sum_{i=1}^{n} (I_{ir})^2,$$

where $R_j$ stands for index of ethnic mosaic, and $I_{ir}$ is a share of religious communities of a certain denomination in confessional structure of the region. The higher values of $R_j$ corresponds to more variegated confessional structure of the region.

We suggest the four following indices to determine the availability of religious services in certain regions:

1) Availability of religious communities for population, which can be calculated using the formula:

$$P_r = R/N,$$

where $P_r$ is the index of availability of religious communities for population, $R$ stands for the number of religious communities in the region, and $N$ signifies the population of the given region, in thousands of people.

2) Availability of religious communities for settlements:

$$R_n = R/P,$$

where $R_n$ is the index of availability of religious communities in settlements, $R$ stands for the number of religious communities in the region, while $P$ signifies the number of settlements in the region.

3) Availability of clergy for settlements:

$$Ps = S/N,$$

where $Ps$ is the index of availability of clergy in settlements, $S$ is the number of clergy of the region, and $N$ stands for the population of the region.

4) Availability of clergy for religious communities:

$$Rs = S/R,$$

where $Rs$ stands for the index of availability of clergy of a certain denomination for religious communities, $S$ is the number of clergy of the region and $R$ is the number of religious communities of the region.
Thus, having conducted the appropriate calculations for the denominations submitted in the report of the Ministry of Culture of Ukraine and the reports of the relevant regional state administrations (Form 1), we will receive 221 indicators, which certainly allows us to accurately determine the similarity of administrative regions by the confessional structure and religious activity of the population, which manifests itself in the number of religious communities and clergy in reference to the population.

To increase the role of the relative weight of the main confession and other denominations, we propose to make 5 rating ranks: the first one is the index of religious mosaics, the second is the average indicator of the density of religious communities per 1000 people, the third is the average indicator of the availability of religious communities for settlements, the fourth is the average indicator of the availability of clergy for settlements and the fifth is the average indicator of the availability of clergy for religious communities. The second, third, fourth and fifth rows reflect the rating of the region as the average value calculated for 55denominations. Thus, the indicator of the religious mosaic index is not lost among the 221 indicators, but is one of the five important criteria.

After making appropriate calculations and creating the rating of Ukrainian regions by the indicators of availability of religious communities for the population and settlements, as well as by the indicator of the religious mosaic index, we received an average indicator reflecting the religious activity and the confessional structure of the region.

In our opinion, the territorial structure of confessional space represents a quantitative and qualitative combination of all existing denominations and trends, in particular relevant religious communities. We propose to use the following elements of the territorial structure:

Confessional region covers an area having specific features of the manifestation and the course of inter-confessional relations, as well as historical, geographical and religious prerequisites for religious commonalities.

Confessional sub-region includes a part of the confessional region that slightly differs in some aspects of confessional structure.

Confessional province is a part of the confessional region with clear expressed peculiarities of confessional structure, which itself may include some local territorial units – confessional localities.

Proposed scheme of confessional regionalization of Ukraine

As a result of the corresponding calculations, we found that the high indices of religious mosaic in Kherson, Kirovohrad and Zaporizhia oblasts (Table 1) is achieved due to the rather high proportion of certain Protestant denominations, in particular Christians of the Evangelical Faith – Pentecostals (CCEP) and Evangelical Christians – Baptists (ECB), and in Kherson oblast there is also a significant proportion of the Ukrainian Autocephalous Church (UAOC) communities. For the city of Kyiv, as an important administrative, spiritual and cultural center of Ukraine, the share of all denominations is significant – Orthodoxy (41.1%), Catholicism (4.3%), Protestantism (38.1%), the other (16.5%). The high religious mosaic in the Chernivtsi oblast is achieved due to a high proportion of different confessions, including not only the dominating Ukrainian Orthodox Church (UOC), but also various Protestant denominations (25.0%), the Ukrainian Orthodox Church of the Kyiv Patriarchate (UOC-KP, 14.2%), the Ukrainian Greek Catholic Church (UGCC) and the Roman Catholic Church (RCC, 5.0%).

Low indices of religious mosaic are typical for Galicia (Lviv, Ivano-Frankivsk and Ternopil oblasts), where the confessions of the UGCC, the UOC-KP, and the UAOC remain dominant, which significantly suppresses the influence of other denominations, as well as for Novgorod-Sivershshyna and Slobozhanschina (Chernihiv, Sumy and Luhansk oblasts), where the UOC remains the dominant confession, and the population is not religiously active, as evidenced by the numerous temples that are closed today.

Such regions as Volhynia (Volhyn and Rivne oblasts), Podolia (Khmelnytsky and Vinnytsia oblasts), Central Dnipro (Dnipropetrovsk oblast), where Orthodoxy is dominant and traditional, are at the stage of transition to a high religious diversity of denominations and communities; the same refers to Transcarpathian oblast, where Orthodoxy and Greek-Catholicism are widespread, and the Crimea, where the communities of Orthodox and Muslims are almost equal.

The conducted calculations allowed us to reveal the following spatial patterns:

1) Regions of the Western Ukraine are the most active in religious life, which, in our opinion, can be explained by the fact that these areas were least influenced by the atheistic power of the Soviet Union, and they managed to preserve the spiritual culture and, accordingly, quickly restored the religious communities of different denominations. In addition, in the late 1980s, representatives of the UGCC and the UAOC returned there from exile, which significantly affected the number of religious communities;

2) Kirovohrad, Zaporizhia and Kherson oblasts are leaders by the indicator of religious mosaics, but they are significantly inferior by the other two indicators. This is due to the fact that in these regions have small total number of religious communities, but of different denominations, among which there is a significant proportion of Protestant trends. This indicates that in these regions, the Ukrainian Orthodoxy may lose the prevailing influence in religious life in some time;

3) Eastern regions of Ukraine, where the UOC is the dominant confession, remain the least religiously active, including visiting temples or other prayer houses.

Based on the rating results, we managed to hold confessional regionalization of the territory of Ukraine and identify the following confessional regions and sub-regions (Figure 1):

Western Ukrainian confessional region, which includes Chernivtsi, Ivano-Frankivsk, Lviv, Transcarpathian, Ternopil, Khmelnytsky, Volhyn and Rivne oblasts. It can be divided into four sub-regions:

1) Volhinian sub-region, including Volyn and Rivne oblasts;
Central, Black Sea and Crimean confessional-geographical region, which includes Odessa, Kirovohrad, Mykolaiv, Kherson, Zaporizhia and Autonomous Republic of Crimea. The Orthodox faith (UOC) is prevailing, but at the same time there is a considerable proportion of Protestant communities; however, the total number of religious communities is quite low. The Crimean sub-region stands out with a significant proportion of Muslim population. 

Eastern confessional region is represented by Dnipropetrovsk, Kharkiv, Donetsk and Luhansk oblasts. It is characterized by low religious activity, the prevalence of Orthodoxy (UOC) with a significant proportion of Protestant communities.

North-Eastern confessional region includes Chernihiv, Sumy and Poltava oblasts, where Orthodoxy is dominant, but the level of religious activity is rather low, as evidenced by the rather small number of registered religious communities.

Thus, by means of the confessional regionalization of the territory of Ukraine, performed in accordance with the elaborated methodology, we managed to
Fig. 1. Confessional regionalization of Ukraine (author’s elaboration)
identify 6 regions, two of which have additionally separate sub-regions.

It should be emphasizes that such a scheme of confessional regionalization of Ukraine substantially differs from the previous elaborations. Firstly, it takes into account not only the boundaries of modern administrative territorial units, but also the limits of historical geographical regions. Secondly, this scheme is based not only on the ratio of individual confessions and denominations, but also takes into account a number of indicators of religious activity – the aspect practically not covered in the previous analysis. Our approach to confessional regionalization is based on the following key basic principles of confessional regionalization: confessional mosaicism, religious activity, territorial proximity, as well as specificity of inter-confessional relations manifested by the level of conflict.

Conclusions
Investigation of the confessional space as an integral part of the religious and sacred spaces is relevant scientific task having both theoretical and practical significance. It solves important issues concerning inter-faith and inter-ethnic, cultural, moral, ethical social relations etc. The confessional regionalization is quite an advisable and sometimes necessary instrument for the development of policy relating to church-state and inter-confessional relations in separate regions and the state as a whole. Therefore, the results of this research can be used by the relevant departments of regional state administrations, as well as by the Department of Religious Affairs and Nationalities of the Ministry of Culture of Ukraine.
